Hazardous event

Definition: understood as “the manifestation of a hazard in a particular place during a particular period, the data on observation of the physical phenomena, including dates, duration, magnitude, spatial footprints, as well as linkages of higher-level systems to cascading hazards.

Adding hazardous event.

1. From the menu bar click on Data -> Hazardous event.
2. Click on “Add new Hazardous event” button.
3. Fill at least all required fields.
4. Click on “Create hazardous event” button.

Hazardous event fields description:

Field - * (required fields)	Format of the field	Description of the field
Hazardous Event Identifier / UUID Identifiers*	System generated (UUID)	System generated
Cascading Hazardous events/ Identifiers	UUID	Causal (Triggering/Source)
Hazard type *	Text	HIP type ID
Hazard cluster	Text	HIP cluster ID
Specific hazard	Text	HIP hazard ID
Hazardous event - national specification	Text	Controlled national hazard taxonomy and list - local languages/mapped to HIPs as per WMO guidelines
Start date	yyyy,yyyy-mm,yyyy-mm-dd	The date when the event started
End date	yyyy,yyyy-mm,yyyy-mm-dd	The date when the event ended
Hazardous event description	Text	Description of the event such as max temp, highest wind speed, severity, local event name e.g. Typhoon Yolanda (Haiyan), and other information that can assist in linking data on associated impacts
Composite event - chains explanation	Text	

Magnitude (overall average and/or per location and time)	Text	The magnitude or might be expressed in different scales and units depending on the hazard. For example, for earthquakes could be magnitude in the Ritcher scale for EQ; for hurricaines it could be category plus details on location specific wind speeds.
Spatial footprint		Spatial area of the hazardous event in a recognized spatial format (point, line, or area). For a wildfire, could be the burn area; for a flood, the flood extent area/footprint; for tsunami the maximum tsunami waves and for storm surge the footprint of surge areas.
Record originator*	Text	Name of the institution that is recording the hazardous event (e.g. UK Met; USGS; NOOA; France Meteo)
Status of the hazardous event	Text	Forecasted/ Ongoing/ Passed
Record status	Text	Draft / Waiting for validation / Needs revision / Validated / Published
Data source	Text	Primary source of the data (e.g. even if a national Geological Institute is recording, the primary observation data can come from a regional organization, like Indian Ocean Commission-UNESCO Tsunami EWS
Record creation date	Date/Timestamp	Date- and timestamp of the hazardous event record

Edit hazardous event:

1. From the menu bar click on Data -> Hazardous event.
2. In the table below listing all hazardous events, under **"Actions"** column, click on the edit icon
3. Edit the data in the form and click on **"Update hazardous event"**

Delete hazardous event

1. From the menu bar click on Data -> Hazardous event.
2. In the table below listing all hazardous events, under **"Actions"** column, click on the delete icon

3. Click on the “Delete permanently” button in the dialog box.

List hazardous event

1. From the menu bar click on Data -> Hazardous event.
2. If there are already hazardous event records, you will see a table below listing all hazardous events.

Disaster Event

Definition: defined as a “serious disruption of the functioning of a community or a society at any scale due to hazardous events interacting with conditions of exposure, vulnerability and capacity, leading to one or more human, material, economic and environmental losses and impacts”.

Add disaster event

1. From the menu bar click on Data -> Disaster events.
2. Click on “Add new Disaster event” button.
3. Fill at least all required fields.
4. Click on “Create disaster event” button.

Disaster event fields description:

Field * (required fields)	**Format of the field**	**Description of the field**
Unique Universal Disaster ID (Serial number)	System Random UUID	System generated
Linking parameter	UUID	Causal (Triggering/Source) - hazardous event / disaster event
Hazard type	Text	HIP type ID
Hazard cluster	Text	HIP cluster ID
Specific hazard	Text	HIP hazard ID
Record status	Text	Draft / Waiting for validation / Needs revision / Validated / Published
Unique Disaster ID (National)	Text	Field to support any type of existing Disaster Unique Identifier with text and numbers
Other Unique Identifier	Text	Field to support any type of existing Disaster Unique Identifier with text and numbers
Event ID in other system (3)	Text	E.g. Could accommodate any regional level or specialized institution identifier, like JRC Risk knowledge datahub
National name	Text	E.g. Typhoon Hyan - for cyclones/typhoons there are specific pre-set lists

GLIDE Number	Text	
Disaster event name in global or regional databases - name (if applicable)	Text	To accommodate for example how different names are given to same event - Cyclone Yolanda (national name in the Philippines - Typhoon Haiyan (internationally used named)
Start Date	yyyy,yyyy-mm,yyyy-mm-dd	The date when the event started
End Date	yyyy,yyyy-mm,yyyy-mm-dd	The date when the event ended
Start date in local format	Text	
End date in local format	Text	
Disaster declaration (Y/N/Unknown)	Yes/ No/ Unknown	Note on whether or not the disaster event suscitated a formal governmental declaration (state of calamity, etc.)
Disaster declarations - type & effect (5)	Text/ Timestamped - possible to record multiple declarations	Description of the declaration type (as per national Disaster Management Laws) and implications (e.g. restrictions of movements, enable allocation of emergency funds, compensation mechanisms, etc.)
Disaster declaration dates (5)	Date- for each one of the multiple declarations recorded	If multiple disaster declarations in different dates, should be possible to record multiple dates and refer to related decree/official declaration decision
Was there an officially issued warning and/or weather advisory?	Yes/ No	
Areas targeted by the warning	Text	
Early Action (1- 5) - date	Date	Protocols activated and resourcing of it - possible to record multiple early action protocols activations (in different times, different geographies, different sectors, by different partners)
Early Action (1-5)-description	Text	Protocols activated and resourcing of it - possible to record multiple early action protocols activations (in different times, different geographies, different sectors, by different partners)
Rapid/Preliminary assessment - Date	Date	When multiple assessments are conducted, the latest records do not override the previous one but are added with their date and description of which assessment, by who and with which purpose.
Rapid/Preliminary assessment - Description	Text	

Response operations (description)	Text	
Date of post-disaster assessment	Date	When multiple assessments are conducted, the latest records do not override the previous one but are added with their date and description of which assessment, by who (e.g. sector department, national or international teams, and with which purpose.
Post-disaster assessment- Description	Text	Explanation on how the assessment was conducted, e.g. household per household survey, individual self-declaration, sampling, remote sensing methods + household level, etc.
Other assessment- Date	Date	Remove - as if we enable multiple time stamped records on line 51 this is no longer needed
Othe assessment- Description	Text	Description on other types of assessments, e.g. specific to a group (e.g. small business owners; school children; fishermen, etc.), or sector-specific
Data sources	Text	Primary data sources (e.g. local Health department; local education department, etc.)
Recording institution	Text	Institutions recording the information - can be specific per records, per sector
Effects (damages + losses) total (in monetary terms - USD)	Currency	
Non-Economic losses	Text	Description of all non-economic losses assessed as a result of or aggravated by the disaster event.
Damages (sub-total) -in monetary terms - local currency	Currency	
Losses (sub-total) - in monetary terms - USD	Currency	
(Emergency) Response operations (description)	Text	Relief and emergency response operations description (e.g. 2 fire brigades were deployed for 2 days, engaging a special unit for chemical fires, clean up operations engaged specialized staff)
Attachments		All reports, including Situation Report, rapid assessments and others
(Emergency) Response cost - total - in local currency	Currency	Total figures coming from the central level accounting of responses costs. Ideally should include all response costs as incurred by sub-national and sector entities which should/ can also be recorded by the sub-national responsible entities in geography specific records/datacards.
(Emergency) Response cost - total - in USD	Currency	

Humanitarian needs - description	Text	PIN (people in need) figures per cluster, PIN and description and description of needs assessed per cluster (when relevant)
Humanitarian needs - total in local currency	Currency	
Humanitarian needs - total in USD	Currency	
Rehabilitation costs - total in local currency	Currency	Calculation from records where disruptions and rehabilitation cost have been recorded
Repair costs - total - total in local currency	Currency	Computation from records where partially damage have been economic valuated
Replacement costs -total in local currency	Currency	Computation from records where totally destroyed have been economic valuated
Recovery needs - total in local currency	Currency	Computation from records where recovery cost have been estimated
Spatial footprint		Spatial area of the disaster event in a recognized spatial format (point, line, or area).
Attachments		

Edit disaster event

1. From the menu bar click on Data -> Disaster event.
2. In the table below listing all disaster events, under **"Actions"** column, click on the edit icon
3. Edit the data in the form and click on **"Update disaster event"**

Delete disaster event

1. From the menu bar click on Data -> Disaster event.
2. In the table below listing all disaster events, under **"Actions"** column, click on the delete icon
3. Click on the "Delete permanently" button in the dialog box.

Disaster Records

Definition: the core variables on disaster impact encompass human direct effects (deaths, missing, injured or ill, affected, displaced, etc.), damages, disruption in

access, production of good and services, losses across productive, social and infrastructure sectors. Damages are understood as partial or destruction to assets, such as facilities, equipment and stocks measured in physical units and economically valuated through references to repair and replacement costs.

Add disaster records

1. From the menu bar click on Data -> Disaster records.
2. Click on “Add new record” button.
3. Fill at least all required fields.
4. Click on “Create Disaster Record” button.

Disaster records fields description:

Field * (required fields)	**Format of the field**	**Description of the field**
Record Universal Unique identifier - serial number	System generated (UUID)	System generated
Linkage parameter - Unique Disaster ID		Causal (Triggering/Source) disaster event
Hazard type	Text	HIP type ID
Hazard cluster	Text	HIP cluster ID
Specific hazard	Text	HIP hazard ID
Record status	Text	Draft / Waiting for validation / Needs revision / Validated / Published
Location (description)	Text	
Start date	yyyy,yyyy-mm,yyyy-mm-dd	Possible to record only year, year + month, or complete year, month and days
End date	yyyy,yyyy-mm,yyyy-mm-dd	Possible to record only year, year + month, or complete year, month and days
Local warning and local instructions (recommended actions)	Text	
Primary data source	Text	Producer/recorder of the primary data (e.g. school manager, health center manager)
Other data sources	Text	Complementary data sources (e.g. satellite image offered by Copernicus to help in damage assessment)
Field assessment conducted	Date	References to the assessment of modalities and methods (household level, self-reported, survey - sampling, etc.)

Assessments methodologies	Text area (2000)	References to the assessment of modalities and methods (household level, self-reported, survey - sampling, etc.)
Recording institution*	Text	Institution opening and filling the record within the disaster event data entry module
Approved by *	Text	
Checked by	Text	Dropdown/Text (at first)
Data collector	Text	Dropdown/Text (at first)
Data collector	Text	
Spatial footprint		Spatial area of the record in a recognized spatial format (point, line, or area).
Attachments		

Edit disaster records

1. From the menu bar click on Data -> Disaster records.
2. In the table below listing all disaster records, under **"Actions"** column, click on the edit icon
3. Edit the data in the form and click on **"Update disaster record"**

Delete disaster records

1. From the menu bar click on Data -> Disaster records.
2. In the table below listing all disaster records, under **"Actions"** column, click on the delete icon
3. Click on the "Delete permanently" button in the dialog box.

Disaster records sub-components

Human Effects

You can add human effects to the disaster record. The system support six types of human affect, (deaths, injured, missing, directly affected, indirectly affected, and displaced)

To add human effects:

1. First you need to add disaster records as described before.
2. Edit the disaster record that you added.
3. Scroll down to the "Human Effects" section.
4. Click **"add new record"**
5. From the drop-down list, choose the type; e.g. (deaths)
6. In the "**category presence"** drop-down list, choose **"Yes"**
7. Fill in the values in total
8. Click **"add"** button to add **"disaggregated values"**
9. Click "Save" button when you are done.
10. Repeat the same steps to add other type of human effect.

Sector Effects (damage, losses, disruption)

You can add sector effects to the disaster record. Sector effects can be damage, losses, or disruption

To add sector effects:

1. First you need to add disaster records as described before.
2. Edit the disaster record that you added.
3. Scroll down to the "**Sector Effects**" section.
4. Click **"Add new record"**, this will redirect you to the disaster records: sectors page
5. Under "Sectors" click on search icon to select the sector

6. Search of select the sector from the tree.
7. Check the check box of "Has Damage", add total sector damage cost or total recovery cost otherwise add the disaggregation of the damage for each asset.
8. Do the same thing with Losses and disruption.
9. Click **"Save changes"** button.

Non-economic Losses

1. First you need to add disaster records as described before.
2. Edit the disaster record that you added.
3. Scroll down to the "**Non-economic Losses**" section.
4. Click **"Add new record"**, this will redirect you to the disaster records: Non-economic Losses
5. From category search, select the category

   Effects on Non-economic Losses

6. Enter the description and click on **"save changes"** button.
